€149 / month

Care Standard from go-live (hosting included)

Understand → Shape

→ **Build** → **Evolve**

Same method as the DatabyPassion studio

EXECUTIVE SUMMARY

Real Life Technologies sells systems that have to work. The public site should do the same. This offer replaces the current WordPress property with a bilingual institutional product — your four pillars, your visual language, on reallife.pt, without touching mail. A working prototype is already live. DatabyPassion delivers it as Digital products: Understand, Shape, Build, Evolve. One engagement lead stays in the work. Care from go-live so the surface does not age the way the current one did. Investment below is for the first product described; Understand can still move scope before signature.

Why this site now

The public site is how a CIO, a partner, a candidate and a client first meet Real Life Technologies. Today they meet an ageing WordPress property: broken chrome, 2020–21 Cisco news as the homepage, mixed navigation. That is not the first impression of an ICT integrator founded in 2008, with around 150 people and certified vendor relationships (Cisco Gold, HPE Partner Ready, CrowdStrike, Huawei).

The mock you shared already has the right language: dark surface, gold ribbon, four pillars, a clear ask. This first product is to ship that on **reallife.pt** — Portuguese default, English switcher — so someone can understand how you help in under a minute and send a real next step. We do not print a parent-group line unless you confirm it in Understand.

A surface that matches the operation
Software, infrastructure, consulting and support in a language a CIO and a client can both read — not a news archive pretending to be a homepage.

One firm, two languages, several markets
Portugal, Mozambique and the markets you already serve see the same story. English is a switch, not a second site to drift out of date.

You already see the product
Shape is not a slide. A working prototype is live before signature, so Build starts from something you have already walked through.

Mail stays untouched
geral@reallife.pt keeps working. DNS for the site is a written cutover with MX, SPF and DKIM left alone. Care from go-live so the site does not rot the way the current one did.

Why DatabyPassion

DatabyPassion is a founder-led technology studio. Line: **Enterprise expertise. Built at startup speed.** We bring the right expertise around the problem and use AI-first ways of working to turn an idea into software tailored to the business — built to solve a real problem and create lasting value.

The studio is four practices around one accountable core. This engagement is **Digital products**: working software people actually open. The first release is small enough to ship, instrumented enough to learn, and solid enough to operate. Data platforms, analytics and AI remain available as Evolve later — only if this product is used and you ask.

Data platforms
Trusted pipelines the team can run

Analytics & decisions
One number the room can act on

AI & automation
Governed workflows, people on exceptions

Digital products
This engagement · software in use

- **One engagement lead stays in the work.** Outcome, team shape and standard from the first session through release — not behind an account layer.
- **Build and show.** Product design, engineering and delivery in the same loop: discovery, interface, Next.js on Vercel, go-live on your domain.
- **Leave something you can run.** Hosting, care and DNS are explicit. Client information is used only for this engagement. Access is least-privilege. Client data is not used to train DatabyPassion or public models for unrelated purposes.

Studio: databy-passion-website.vercel.app

First product

What ships is a complete institutional surface, not a homepage with placeholders behind it. Portuguese is the default. English is a first-class switcher, not a bolted-on translation.

Page	What it is for
Home	Make the firm readable in seconds: sculpture hero, gold ribbon, How We Help, Ready to Talk, four pillars, partner names in text.
Software	Applications, portals and integrations that sit on systems you already run — the product story, not a vendor catalogue.

Page	What it is for
Infrastructure	Networks, data centre, cloud and workplace. Built to look like an integrator, not a hosting brochure.
Consulting	Architecture and transformation with the team that then implements. Useful to a CIO who has been sold strategy without delivery.
Support	Operate what was delivered. Makes clear the relationship does not end at go-live.
About	2008, geographies, people. Parent group only if Understand confirms it.
Contact	A path a real buyer can use, plus geral@reallife.pt. Form-to-inbox is wired at go-live, not in the public prototype.

In this price: responsive desktop and mobile, cookie and privacy pages, performance and accessibility to a professional baseline, repository handover, cutover plan. First-month Care can sit in loop 3 so it is not a surprise.

Out of this first product: a CMS for the internal team, partner trademark logos without written permission (text names are used), country-specific sites, data platforms or AI products. Those last two are studio practices; they become a conversation only if the site is used and you ask.

Prototype already in Shape

A working Next.js prototype is live, built from your mock and the live copy on reallife.pt:

<https://reallifetechnologies.vercel.app> · source github.com/Tiago-Domingues/reallifetechnologies

Preview stays on Vercel until you point DNS. WordPress remains on reallife.pt until written go-live. Build loop 1 starts from this lock, not from a blank file.

How we deliver

The method is the same as the studio: **Understand** → **Shape** → **Build** → **Evolve**. If the word “sprints” is useful internally, they are short visible loops inside Build — not a different way of working.

Build loop	What you see
1 — Homepage lock	Hero, ribbon, How We Help, Ready to Talk. Art direction signed off on desktop and mobile.
2 — Pillars / About / Contact	Four service routes plus about and contact, in the same language as the home, working on desktop and mobile.
3 — Bilingual, legal, DNS	PT/EN complete, cookies and privacy, cutover with MX untouched. First month of Care can start here.

Domains and mail

Mail in use today: **geral@reallife.pt**. Pointing the site at Vercel is an A/CNAME change only. MX, SPF and DKIM are not touched.

Confirm in Understand	Agree in writing before go-live
Who holds reallife.pt, and who has DNS / DNSSEC access?	Canonical host: reallife.pt or www (one primary, the other 301)
Other hosts (reallife.com, reallifetechnologies.com, country TLDs)?	Extras are redirects, not separate country sites, unless you explicitly want that
Email must keep working through cutover	WordPress stays live until go-live; preview on *.vercel.app; DNS only after written yes + MX check

Investment — Build

Default first product	€9,500 excluding IVA €11,685 including IVA at 23%
-----------------------	--

Item	EUR ex-IVA
Institutional site, PT/EN, seven routes, prototype already visible, go-live on your domain, handover	9,500
Build total	9,500

Payment: **40% on start of loop 1 / 40% on start of loop 2 / 20% at go-live**. 50/50 if you prefer not to split the middle. If Understand shrinks scope, floor **€8,000**. If a CMS and training are added, **€14,500**. Those alternatives are not this default.

In the Portuguese market, a custom bilingual institutional site typically sits between roughly €8,000 and €20,000 excluding IVA. This default is the low-mid of that band for a defined first product with a working prototype already in front of you — not a few-thousand-euro WordPress template.

Evolve — hosting and care

Hosting and maintenance are monthly, not folded into the build. That is how the current site aged: a launch with no owner afterwards. Recommended from go-live: **Care Standard**.

SKU	Includes	EUR / month ex-IVA
Hosting only	Vercel, SSL, backups	49
Care Standard (recommended)	Hosting, uptime watch, patches, 2 hours of edits / month	149
Care Plus	4 hours of edits, next-business-day SLA	249

Unused edit hours do not roll. Work beyond the monthly allowance is quoted before it starts. Data platforms or AI are not in this first product.

Next steps

1. Close remaining Understand items in writing: who signs, domains, parent-group line yes/no, PT/EN, Care from day one.
2. Signature of this offer (or an adjusted version if Understand changed scope).
3. Build loop 1 starts. Preview remains on Vercel until written go-live.

Controls on this engagement: contractual confidentiality; least-privilege access; no unrelated model training. Independent legal-partner support is available if contracting needs it — not a permanent bench member, and not in this price. Legal entity details including NIF and registered address are provided at contracting.
