

DatabyPassion

ENTERPRISE EXPERTISE. BUILT AT STARTUP SPEED.

COMMERCIAL OFFER · DIGITAL PRODUCTS

Real Life Technologies website

A bilingual institutional site that matches the firm: four pillars, Nuno's art direction, shipped as working software — not a brochure that pretends.

PREPARED FOR

Nuno Melo São Pedro · Real Life Technologies

PREPARED BY

DatabyPassion · Lisboa, Portugal

DATE

16 September 2026

VALIDITY

14 days from the date above

€9,500

Build, excluding IVA

€149 / month

Care Standard from go-live (hosting included)

Understand → Shape

→ Build → Evolve

Same method as the DatabyPassion studio

EXECUTIVE SUMMARY

The live site at reallife.pt is not at the level of an ICT integrator of this size. The mock you shared already has the right language: dark, gold, four pillars. This offer is to ship that first product — Portuguese and English, on your domain, without touching mail — as DatabyPassion's Digital products practice. Numbers below are the default after the discovery call; they can move if Understand changes scope. They are not a close on the call.

Project: Real Life Technologies institutional website

Client: Real Life Technologies

Prepared by: DatabyPassion, Lisboa, Portugal

Date: 16 September 2026

Currency: EUR. All prices exclude IVA unless stated otherwise. IVA is shown at the current legal rate of 23 percent.

Validity: 14 days from the date above.

Why DatabyPassion

DatabyPassion is a founder-led technology studio. Line: **Enterprise expertise. Built at startup speed.** This engagement is the Digital products practice: websites, web apps, internal tools and digital experiences — shipped as working products, not a brochure that pretends.

- **One engagement lead stays in the work.** No account layer between the call and the commit.
- **Build and show.** A working prototype exists before you sign. The first release is small enough to ship.
- **Leave something you can run.** Hosting, care and DNS are explicit. Mail (MX) is not touched.

Studio: databy-passion-website.vercel.app

Why this site now

Google and clients currently see an old WordPress property: broken chrome, 2020–21 Cisco news as homepage, mixed navigation. The firm is an ICT integrator founded in 2008, around 150 people, with certified vendor relationships (Cisco Gold, HPE Partner Ready, CrowdStrike, Huawei). The public surface should match that. Your mock already points the way. We modernise **reallife.pt** in that language. We do not put a parent-group line on the site unless you confirm it on the call.

First product

Portuguese default, English switcher. Routes:

Page	Intent
Home	Sculpture hero, gold ribbon, How We Help, Ready to Talk, four pillars, trust names
Software	Applications, portals, integrations
Infrastructure	Networks, data centre, cloud, workplace
Consulting	Architecture and transformation with the team that then builds
Support	Operate what was delivered
About	2008, geographies, people — parent group only if you confirm
Contact	Form plus geral@reallife.pt

Out of this first product: CMS, real form-to-inbox until go-live, partner trademark logos without permission (text names are fine), data platforms / AI (Evolve later, only if earned).

Prototype

A working Next.js prototype is already visible:

<https://reallifetechnologies.vercel.app>

Source: github.com/Tiago-Domingues/reallifetechnologies. Preview stays on Vercel until you point DNS. WordPress remains on reallife.pt until written go-live.

Domains

Facts to confirm, then decisions to write down. Mail in use today: **geral@reallife.pt**. Pointing A/CNAME at Vercel must not touch MX, SPF or DKIM.

Confirm	Agree before go-live
Who holds reallife.pt (company, group IT, agency, Nuno)? DNS / DNSSEC access?	Canonical host: reallife.pt or www (one primary, the other 301)
Existing reallife.com, reallifetechnologies.com, country TLDs?	Extra hosts: redirects only vs separate country sites
Must email keep working through cutover?	Keep WordPress live until go-live; preview on *.vercel.app
Stay on reallife.pt or a new independent brand domain?	Who buys/renews; who holds the registrar login. DNS change only after written yes + MX check

How we deliver

If the word “sprints” comes up: short loops inside Build. The method is Understand, Shape, Build, Evolve — the same as the studio site.

Loop	What you see
1 — Homepage lock	Hero, ribbon, How We Help, Ready to Talk
2 — Pillars / About / Contact	Four routes plus about and contact, working on desktop and mobile
3 — Bilingual, legal, DNS	PT/EN, cookies/privacy, cutover plan with MX untouched. First month of Care can sit here so it is not a surprise.

Build price

Default first product	€9,500 excluding IVA €11,685 including IVA at 23%
-----------------------	--

Item	EUR ex-IVA
Institutional site, PT/EN, seven routes, prototype already visible, go-live on your domain	9,500
Build total	9,500

Payment: **40% on start of loop 1 / 40% on start of loop 2 / 20% at go-live**. 50/50 if you prefer not to split the middle. Floor if Understand shrinks scope: €8,000. If a CMS and training are added: €14,500. Those alternatives are not this default.

Portuguese market context for a custom bilingual institutional site is roughly €8,000–20,000 excluding IVA. This default sits in the low-mid of that band as a first official DatabyPassion product — not the WordPress PME band of a few thousand euros.

Evolve — hosting and care

Hosting and maintenance are monthly, not folded into the build. Recommended from go-live: **Care Standard**.

SKU	Includes	EUR / month ex-IVA
Hosting only	Vercel, SSL, backups	49
Care Standard (recommended)	Hosting + uptime + patches + 2 hours of edits / month	149
Care Plus	4 hours of edits, SLA next business day	249

Data platforms or AI are not in this first product. They become a conversation only if the site is used and you ask.

Next steps

1. Discovery call (Understand) — already scheduled.
2. Written recap the same day: who signs, domains, parent-group line yes/no, languages, Care from day one, recap date.
3. This offer, filled with anything Understand changed, sent the same day. Do not treat the call as a price close.
4. Signature, then Build loop 1.

Controls if you ask: contractual confidentiality, least-privilege access, no unrelated model training. Legal entity details including NIF and registered address are provided at contracting.
